

Trust Indus

creating global tax infrastructures
keeping your profits within your company

Trust Indus creates legal governmental accepted global tax infrastructures that's allows companies that operates international to reduce their tax costs severely.

What motivated us?

- 1) Business Health - Just because health businesses needs their profits as capital within their companies. Own internal capital gives good corporate financial balance, makes them strong. It's an assurance that market changes or human faults not will threaten the companies future. These days ball by profit earned capital goes to much to taxes and to easy to shareholders. Companies needs capital like people need air. It becomes time that governments and shareholders realize that a healthy business is the best financial insurance for the future. We reduce tax costs for all companies that has international connections and make them more strong and healthy by doing this, by stopping their current capital drain by tax.
- 2) Business Equality - Till now only the multinationals where able to reduce their tax costs to almost zero (the reason behind their everyday increasing strength). From now each company can reduce their tax costs and hold by this their profits within the company. This is a more fair situation by creating an equal tax cost saving system available for each company and not only for the big ones. We equalize the tax saving possibilities for all companies, so that not only the big ones can profit of them.
- 3) Wealth Equalization - We distributed (by transferring tax payments to less developed countries) corporate profits around the world, giving governments of less developed countries the income they need. Our tax infrastructures really supports governments in developing countries by giving them global / western economy originated tax income.
- 4) Wise Government - We educated each 'to much on their own growth focused' government that their taxes weaken their national businesses and the competitor strength of the national economy, so that they stop their constant government growing process. We certainly aren't against governmental structures: they are a blessing for the world. But wise governments knows the right balance between being a blessing and being a burden in each function they consider.
- 5) Enforced Management - And this on tax saved capital gives the corporate management teams more power to motivate their company shareholders to do the same. Management must be strong to decrease the capital flow to shareholders in benefit of the companies future power. Boards of companies has become robbers for whom the corporate future is less important than shareholders short sighted capital hunger. Shareholders makes companies poor and weak. We supporting managements to ask shareholders to lower their profit drain demands in exchange of better and future focused strategy.

We reduce your company profit tax to 2%. Our management fee is 2% of the corporate profits that goes over our tax saving structures. So your current tax expenses will be reduced from 35% to 4% by tax infrastructures, leaving the other 31% of your profit within your company.
